AQUEOUS PARTS WASHERS

DETERGENTS FOR AQUEOUS PARTS WASHERS

Safe, effective cleaning with Cuda biodegradable detergents engineered to do the job right.

With Cuda, you'll find a family of detergents that are carefully formulated by detergent chemists, blended specifically for Cuda parts washers and manufactured in our own detergent manufacturing facility.

In short, Cuda detergents are engineered to speed the cleaning process and give you superior results in a wide range of applications. So whether you're using a Cuda automatic top loader or an automatic front loader, be sure to specify Cuda detergents.

ALL PURPOSE DETERGENTS:

Super Clean

An all-purpose automatic parts washer detergent, this powdered concentrate also is effective in cleaning a variety of parts, including iron, steel, soft metals, plastics and electronics. It also contains a corrosion inhibitor package and a modified defoamer package to assist with foam control.

Super Clean Plus

Super-Clean Plus is an extra-strength, high—but buffered—alkaline blend that is particularly effective in penetrating and cleaning hard to remove grease, oil, tar, and carbon based deposits. It is biodegradable and is designed specifically for use in industrial parts washers. Cuda Super Clean Plus helps maintain enhanced oil and grease cleaning properties even at the end of the bath life. It contains ingredients to combat water hardness problems and includes an advanced defoamer to control foaming in the machine sump. It can be used to clean steel, iron, stainless steel, aluminum, copper, brass and plastics.

Ultra-Clean Liquid

A highly concentrated, biodegradable all-purpose detergent for use in automatic and manual parts washers. It also contains water softening agents, rust inhibitors and high temperature surfactants. Ultra-Clean Liquid dissolves completely, rinses clean and produces no foam, even when used with synthetic oils. This concentrated liquid has long-lasting effectiveness and is economical to use.

Manual Parts Washer Detergent

Cuda Manual Parts Washer Detergent is a readily biodegradable, neutral pH, water-based detergent formulated for use in manual parts washers and aqueous parts sinks. It removes greases, oils and grime and can be used on most surfaces, including steel, stainless steel, brass, aluminum, copper and plastics. This detergent has a pleasant citrus odor.

SPECIALTY DETERGENTS:

Phosphatizer

Cuda Phosphatizer is a complete one-step detergent and phosphatizing system for cleaning metal parts and preparing them for painting. It is a biodegradable cleaner and phosphatizer for iron and steel designed specifically for use in Cuda Industrial Parts Washers, and for spray, dip or wipe-on cleaning and phosphatizing. Cuda Phosphatizer cleans equally well in hard or soft water and is formulated with a unique combination of cleaning agents and defoamers that make it a long lasting economical solution to use.

Defoamer

A biodegradable defoamer for reducing and controlling foam buildup in the sump solution. Can be used with all Cuda products and does not interfere with the detergent cleaning performance.

Vapor Corrosion Inhibitor

This is the ideal rust-inhibitor package for parts washers because it resists corrosion of both wetted surfaces and metal surfaces exposed to steam. Most detergents have inhibitors that work in the liquid phase, but Cuda Vapor Corrosion Inhibitor has a characteristic that allows the inhibitor package to blend with the steam for total protection.

Aluminum & Alloy

Ideal for cleaning aluminum, especially truck trailers and aircraft parts. It can be used safely on a number of alloys, such as brass, stainless steel and copper, as well as plastics. Cuda Aluminum & Alloy is engineered to work in hard or soft water and removes baked-on carbon, oil and grease.

Paint & Powder Coat Remover

Paint and Powder Coat Remover is a specialized, biodegradable, alkaline stripper that is quick and effective at dissolving all types of paint and powder coatings, including epoxy finishes. It is effective for paint removal off iron and steel, but is not intended for use on aluminum, magnesium or galvanized metals.
